

## **II.A. HIV/AIDS TESTING**

### **ANONYMOUS TESTING:**

Individuals who test positive for HIV anonymously are exempt from HIV infection reporting. However, they are required to re-test confidentially to receive services from a publicly funded health provider.

### **CONFIDENTIAL TESTING:**

Positive test results are reported to the local County Health Department in a way similar to other Sexually Transmitted Diseases. HIV infection reporting allows Department of Health staff to offer follow-up activities to those who test positive, including post-test counseling for those who do not return for test results, linkages to medical and psychosocial services, and voluntary Partner Services. Confidential testing can more readily facilitate access into medical care for positive clients and can assist medical providers in offering more integrated care with other medical conditions that positive clients may have.
