myGeoNav

Palm Beach County Information Systems Services has recently completed work on a technical refresh of the Palm Beach County myGeoNav web-based mapping application. Demand for mapping applications has increased rapidly as technology and smart phones have made us all aware of the power of location and convenience of mobility. There are several key enhancements that have been made to this latest release of myGeoNav in an effort to enhance your mapping experience.

Speed: We've super charged this application so that it runs much faster.

Clean: The interface is less cluttered and much cleaner than its predecessor.

Mobility: Screen automatically re-sizes with custom feature sets to optimize use of specific device types – smart phone, tablet or desktop computer.

Search: We are down to a single search box, you can search for everything within a single search box, parcels, property owners, addresses, municipalities, street intersections, GPS coordinates, parks and more.

To find a GPS location on myGeoNav type **gps latitude, longitude** (see picture above) in the search box, hit the enter key and the map will find and zoom you to that location.

myGeoNav is a powerful resource that allows users to empower themselves and others to make informed decisions and communicate information using the latest Palm Beach County GIS data available. myGeoNav provides access to countywide maps, aerial photography and more than 300 specific data layers.
