

10 Basic Rules

Rule #1 – No Construction related to any Fire related systems may start until plans have been submitted, reviewed and approved with the appropriate Permit being issued.

Rule #2 – All approved stamped plans and permits shall be on site at the time of any inspection.

Rule #3 – All road surfaces shall be of sufficient material to withstand the weight of firefighting apparatus under all weather conditions

Rule #4 – Roadways are to remain clear at all times with parking only allowed on one side of the road

Rule #5 – All chained gates are required to have a Knox Lock for Fire Rescue access

Rule #6 - Construction with combustible materials may not start until a water supply sufficient for firefighting operations has been established

Rule #7 – For new high-rise structures, a standpipe for fire operations shall be provided at least one-floor below the highest floor under construction

Rule #8 – A representative of the trade calling in the inspection will be on site and accompany the inspector during the inspection.

Rule #9 – Unless a TCO has been approved, no non-construction personnel or equipment shall be allowed within a structure under construction

Rule #10 – All Special Events must consider Fire Rescue requirements
